

Siltech Classic Legend

CABLE
CABLE SYSTEM

Siltech's Classic Legend cables are a range of high-quality connections designed to provide exceptional audio performance for any system. The cables are made with Siltech's proprietary G9 silver-gold alloy conductors, developed through extensive research and testing. This alloy offers improved conductivity and reduced distortion, resulting in a smoother and more detailed sound. The Classic Legend series includes different classes of cables, each with its own interconnects, speaker cables, and power cables. Digital, USB, and network cables are also available.

Remarkable consistency

Classic Legend cables are remarkable in their consistency. The cables are all designed to be as neutral as possible, minimising any alteration or interference with the audio signal. Consequently, they work well in any cable system infrastructure

but come into their own in an all-Siltech cable system. They aim to provide transparent and accurate sound reproduction, allowing the true nature of the source and amplifier to shine through.

The Classic Legend cables are also noted for being compatible with the widest range of audio electronics, often with some of the most esoteric equipment in hi-fi. They are also known for their build quality and attention to detail. While the cables may not provide dramatic changes to the soundstage or tonality of a system, they excel in their ability to remove electronic artefacts and deliver a pure and natural sound. It's little wonder that Classic Legend has joined other cable families in the Siltech line-up, becoming highly regarded by audiophiles for their exceptional performance.
